

An (Anna) Nguyen

nnka.2706@gmail.com | github.com/khanhan-nguyen | 917-487-0314 | New York, NY

EDUCATION

Fordham University, Bachelor of Science in Computer Science

Expected Graduation: May 2029

- **GPA:** 3.97/4.0
- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Discrete Structures
- **Honors:** Faber Award, Woolworth Award

WORK EXPERIENCE

FPT Software

Vietnam, June 2026 – August 2026

AI Engineer Intern

- Built **data preprocessing pipelines** in Pandas and Scikit-learn to clean, encode, and scale features for predictive models, which improved throughput by **30%**.
- Handled missing-value imputation and categorical encoding across raw datasets to prepare clean data for training.
- Outperformed initial baseline error metrics **by 15%** by training and tuning a Linear Regression model for housing price forecasting, achieving an **R-squared of 0.66**.
- Implemented classification models to analyze survival rates, achieving **82% accuracy** through train-test validation.

Innovator Hub Asia

Vietnam, June 2025 – August 2025

Software Engineer Intern

- Automated **data prep workflows** using custom **Python** scripts to parse and clean raw client datasets, reducing manual processing time **by 40%**.
- Developed **10+ reusable web components** using JavaScript, HTML5, and CSS3, expanding front-end features across client portals.
- Connected **RESTful APIs** to stream real-time data feeds, achieving responsive dynamic previews in **under 500ms**.
- Translated **10+ Figma designs** into responsive code, refining UI components via feedback during daily team check-ins.

PROJECTS

Task Management (*Web Application*)

React.js, Vite, JavaScript, CSS, Web Storage API

- Architected a **responsive single-page application in React.js** featuring full CRUD operations, multi-criteria status filtering (All, Pending, Completed), and persistent state across sessions.
- Orchestrated **dynamic state updates with React Hooks** (useState, useEffect) and immutability patterns (.map(), .filter()) to automate multi-tier task prioritization and XSS input sanitization.
- Crafted a polished and mobile-friendly interface **using CSS3 Custom Properties and Flexbox** to ensure cross-device compatibility.

Background Remover (*Web Application*)

HTML, JavaScript, CSS, REST API

- Launched a responsive web application powered by the Remove.bg **REST API** to automate image background removal and featuring real-time side-by-side previews.
- Streamlined client-side file uploads via **HTML5 Drag-and-Drop and FileReader APIs**, incorporating input validation and dynamic DOM manipulation for instantaneous local previews.
- Delivered a cross-browser layout with **CSS Grid, Flexbox, Custom Properties, and mobile-first media queries** to guarantee a smooth user experience across devices.

Movie Trends Data Analyzer (*Data Analysis*)

Python, Pandas, Matplotlib

- Conducted Exploratory Data Analysis (EDA) on a Kaggle dataset of **10,000+ movie records** to uncover revenue trends, popular genres, and audience rating patterns spanning 20 years.
- Transformed raw data with Pandas, resolving **500+ missing values** and eliminating duplicates to safeguard accuracy.
- Visualized box-office insights through **7+ distinct Matplotlib charts** (bar charts, scatter plots), converting findings into actionable recommendations.

TECHNICAL SKILLS

Programming Languages: Python, SQL, C, JavaScript, HTML5, CSS3

Libraries & Frameworks: React.js, Pandas, NumPy, Scikit-learn, Matplotlib

Databases & Tools: Git/GitHub, MySQL, Vite, Figma, REST APIs
